

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

- 1 1. (Previously Presented) A computer implemented method of transferring funds from one online account to another, the method comprising the steps of:
 - 3 receiving a transfer request from a first user, the transfer request including an amount of funds for transfer from a first online account associated with the first user and identification information for a recipient of the funds, the identification information including an electronic message address for the recipient;
 - 7 automatically sending an electronic message to the recipient using the electronic message address, the electronic message indicating that funds are ready for transfer to the recipient;
 - 10 receiving a response from the recipient accepting or rejecting the transfer of funds wherein the response includes a request by the recipient to open an account;
 - 12 opening a second account for the recipient; and
 - 13 transferring said amount of funds from the first account to the second account associated with the recipient if the response indicates acceptance.
- 1 2. (Original) The method of claim 1, wherein the electronic message address is an e-mail address, and wherein the electronic message is an e-mail message.
- 1 3. (Original) The method of claim 1, wherein the electronic message address includes a user ID associated with the recipient, and wherein the step of automatically sending an electronic message includes initiating an instant message session with the recipient based on the user ID.
- 1 4. (canceled)

1 5. (Original) The method of claim 1, wherein the response from the recipient
2 includes information identifying the second account.

1 6. (Previously Presented) A computer implemented method of transferring
2 funds from one online account to another, the method comprising the steps of:

3 receiving a transfer request from a first user, the transfer request including an
4 amount of funds for transfer from a first online account associated with the first user and
5 identification information for a recipient of the funds, the identification information including an
6 electronic message address for the recipient, wherein the transfer request further includes a
7 request for identity confirmation;

8 automatically sending an electronic message to the recipient using the electronic
9 message address, the electronic message indicating that funds are ready for transfer to the
10 recipient;

11 receiving a response from the recipient accepting or rejecting the transfer of funds
12 wherein the response from the recipient includes identity information responsive to the request
13 for identity confirmation;

14 automatically sending the identity information to the first user;

15 receiving from the first user an acceptance or a rejection of the identity
16 information; and

17 transferring said amount of funds from the first account to a second account
18 associated with the recipient if the response indicates acceptance and if an acceptance of the
19 identity information is received from the first user.

1 7. (Original) The method of claim 6, wherein the request for identity
2 confirmation includes a query, and wherein the identity information from the recipient includes
3 an answer to the query.

1 8. (Original) The method of claim 1, further including the step of opening
2 the first account in response to a request from the first user to open the first account.

1 9. (Canceled)

1 10. (Canceled)

1 11. (Original) The method of claim 1, wherein the method is implemented in
2 a host server, and wherein the electronic message includes a URL link to the host server.

1 12. (Currently Amended) A computer implemented method of transferring
2 funds from one online account to another, the method comprising the steps of:

3 receiving a payment request from a first user, the payment request including an
4 amount of funds for transfer to an online account associated with the first user and identification
5 information for a recipient of the payment request (payor), the identification information
6 including an electronic message address of the payor;

7 automatically sending an electronic message to the payor using the electronic
8 message address, the electronic message including the amount of funds to be transferred to the
9 first user;

10 receiving a payment response from the payor indicating acceptance or rejection of
11 the payment request, wherein if the payment response from the payor indicates acceptance of the
12 payment request, the payment response further includes a request for identity confirmation;

13 sending a second electronic message to the first user indicating whether the
14 payment response from the recipient indicates acceptance or rejection of the payment request;
15 and if the payment response indicates acceptance:

16 receiving a transfer request from the first user indicating that the funds be
17 transferred to an identified online account associated with the first user, wherein the transfer
18 request from the first user includes identity information responsive to the request for identity
19 confirmation;

20 automatically sending the identity information to the payor; and
21 receiving from the payor an acceptance or a rejection of the identity information;

1 13. (Previously Presented) The method of claim 12, wherein the electronic
2 message address is an e-mail address, and wherein the electronic message is an e-mail message.

1 15. (Canceled)

1 17. (Original) The method of claim 12, wherein the payment response further
2 includes information identifying the second account associated with the payor.

1 18. (Original) The method of claim 12, wherein the payment response
2 includes a request to open an account for the payor, the method further including the steps of:
3 opening the second account; and
4 depositing funds into the second account.

1 19. (Canceled)

1 21. (Original) The method of claim 12, wherein a plurality of online accounts
2 are associated with the first user, and wherein the identified account is one of the plurality of
3 online accounts.

1 22. (Original) The method of claim 21, further including the step of
2 transferring funds from the identified account to a different one of said plurality of accounts in
3 response to a request from the first user.

1 23. (Previously Presented) In a computer network, a computer system
2 communicably coupled to a database of user accounts, the user accounts including values
3 representing funds maintained by a financial institution on behalf of the users, the computer
4 system executing code for updating the values in the user accounts, the code including
5 instructions for:

6 processing a transfer request received by the computer system from a first user
7 over the network, the transfer request including an amount of funds for transfer from a first user
8 account associated with the first user and identification information for a second user, the
9 identification information including an electronic message address for the second user;

10 automatically sending an electronic message to the second user using the
11 electronic message address, the electronic message indicating that funds are ready for transfer to
12 the second user;

13 processing a response received from the second user to determine whether the
14 second user has accepted or rejected the transfer of funds, wherein the response includes a
15 request by the second user to open an account;

16 opening a second account for the second user; and

17 updating the values of the first user account and the second user account
18 associated with the second user to reflect that the amount of funds was transferred from the first
19 user to the second user if the response indicates acceptance.

1 24. (Previously Presented) The system of claim 23, wherein the electronic
2 message address is an e-mail address, and wherein the electronic message is an e-mail message.

1 25. (Previously Presented) The system of claim 23, wherein the electronic
2 message address includes a user ID associated with the second user, and wherein the step of
3 automatically sending an electronic message includes initiating an instant message session with
4 the second user based on the user ID.

1 26. (Canceled)

1 27. (Canceled)

1 28. (Currently Amended) In a computer network, a computer system
2 communicably coupled to a database of user accounts, the user accounts including values
3 representing funds maintained by a financial institution on behalf of the users, the computer
4 system executing code for updating the values in the user accounts, the code including
5 instructions for:

6 processing a transfer request received by the computer system from a first user
7 over the network, the transfer request including an amount of funds for transfer from a first user
8 account associated with the first user and identification information for a second user, the
9 identification information including an electronic message address for the second user, wherein
10 the transfer request further includes a request for identity confirmation;

11 automatically sending an electronic message to the second user using the
12 electronic message address, the electronic message indicating that funds are ready for transfer to
13 the second user;

14 processing a response received from the second user to determine whether the
15 second user has accepted or rejected the transfer of funds, wherein the response from the second
16 user includes identity information responsive to the request for identity confirmation;

17 automatically sending the identity information to the first user;

18 processing a second response received from the first user indicating acceptance or
19 rejection of the identity information; and

20 updating the values of the first user account and a second user account associated
21 with the second user to reflect that the amount of funds was transferred from the first user to the
22 second user if the response indicates acceptance and if the second response indicates acceptance.

1 29. (Original) The computer system of claim 28, wherein the request for
2 identity confirmation includes a query, and wherein the identity information from the second
3 user includes an answer to the query.

1 30. (Previously Presented) In a computer network, a computer system
2 communicably coupled to a database of user accounts, the user accounts including values
3 representing funds maintained by a financial institution on behalf of the users, the computer
4 system executing code for updating the values in the user accounts, the code including
5 instructions for:

6 processing a payment request received from a first user over the network, the
7 payment request including an amount of funds for transfer to a first user account associated with
8 the first user and identification information for a second user, the identification information
9 including an electronic message address for the second user;

10 automatically sending an electronic message to the second user using the
11 electronic message address, the electronic message including the amount of funds to be
12 transferred to the first user;

13 processing a payment response received from the second to determine whether the
14 second user has accepted or rejected the payment request, wherein if the payment response from
15 the second user indicates acceptance of the payment request, the payment response further
16 includes a request for identity confirmation;

17 sending a second electronic message to the first user indicating whether the
18 payment response from the recipient indicates acceptance or rejection of the payment request;
19 and if the payment response indicates acceptance:

20 processing a transfer request received from the first user to determine a user
21 account identified by the first user, wherein the transfer request from the first user includes
22 identity information responsive to the request for identity confirmation;
23 automatically sending the identity information to the second user; and
24 processing a second response received from the second user to determine whether
25 the identity information was accepted or rejected; and
26 updating the values of the identified account and a second user account associated
27 with the second user to reflect that the amount of funds was transferred from the second user to
28 the first user if the identity information was accepted.

1 31. (Previously Presented) The system of claim 30, wherein the electronic
2 message address is an e-mail address, and wherein the electronic message is an e-mail message.

1 32. (Previously Presented) The system of claim 30, wherein the electronic
2 message address includes a user ID associated with the second user, and wherein the step of
3 automatically sending an electronic message includes initiating an instant message session with
4 the second user based on the user ID.

1 33. (Canceled)

1 34. (Previously Presented) In a computer network, a computer system
2 communicably coupled to a database of user accounts, the user accounts including values
3 representing funds maintained by a financial institution on behalf of the users, the computer
4 system executing code for updating the values in the user accounts, the code including
5 instructions for:

6 processing a payment request received from a first user over the network, the
7 payment request including an amount of funds for transfer to a first user account associated with
8 the first user and identification information for a second user, the identification information
9 including an electronic message address for the second user;

10 automatically sending an electronic message to the second user using the
11 electronic message address, the electronic message including the amount of funds to be
12 transferred to the first user;

13 processing a payment response received from the second user to determine
14 whether the second user has accepted or rejected the payment request, wherein the payment
15 response includes a request by the second user to open an account;

16 opening the second account for the second user; and

17 sending a second electronic message to the first user indicating whether the
18 payment response from the recipient indicates acceptance or rejection of the payment request;
19 and if the payment response indicates acceptance:

20 processing a transfer request received from the first user to determine a user
21 account identified by the first user.

1 35. (Original) The computer system of claim 30, wherein the payment
2 response from the second user includes information identifying the second account.

1 36. (Original) A computer implemented method of transferring funds
2 between user accounts in a computer network including two or more affiliate banks, wherein the
3 affiliate banks conduct fund transfer settlements, the method comprising the steps of:

4 receiving a transfer request to transfer funds from a first online account associated
5 with a first user to a second online account associated with a second user, wherein the transfer
6 request includes a bank identifier that identifies a first one of the affiliate banks; and

7 transferring funds from the first online account to the second online account after
8 the second user has approved the transfer request;

9 wherein the first affiliate bank conducts the fund transfer settlement for the
10 transferred funds on behalf of the first user.

1 37. (Original) The method of claim 36, wherein the settlement includes one
2 of an ACH transaction, a check card transaction and a credit card transaction.

1 38. (Original) The method of claim 36, wherein the transfer request includes
2 an electronic message address for the second user, wherein the method further includes the step
3 of automatically sending an electronic message to the second user using the electronic message
4 address, wherein the electronic message indicates that funds are ready for transfer to the second
5 user.

1 39. (Original) The method of claim 38, wherein the electronic message
2 address is an e-mail address, and wherein the electronic message is an e-mail message.

1 40. (Original) The method of claim 38, wherein the electronic message
2 address includes a user ID associated with the second user, and wherein the step of automatically
3 sending an electronic message includes initiating an instant message session with the second user
4 based on the user ID.

1 41. (Original) The method of claim 36, further including the step of receiving
2 a second bank identifier from the second user, the second bank identifier identifying one of the
3 affiliate banks for conducting fund transfer settlement on behalf of the second user.

1 42. (Original) The method of claim 41, wherein the first and second bank
2 identifiers indicate the same affiliate bank.

1 43-47. (canceled)

1 48. (New) The method of claim 36, wherein the transfer request includes a
2 request from the first user to pay funds to the second user.

1 49. (New) The method of claim 36, wherein the transfer request includes a
2 payment request from the second user requesting payment by the first user.
